

Post-Surgery Care Instructions

Thank you for trusting us with your pet's care. Please read and carefully follow the instructions below to ensure a safe and comfortable recovery for your pet.

Check-Out Time: Check-out is the **same day of surgery between 3:00pm and 5:00pm.**

After-Care Instructions:

Food & Water:

- You may give a **small amount of water** after picking up your pet.
- If there is **no vomiting** after 30–45 minutes, offer a **small amount of food**.
- Resume normal feeding the following day.

Activity & Incision Care:

- Prevent licking of the surgical area!
 - If your pet was sent home with a cone, it must stay on for **7–10 days**.
- Check the incision **once or twice daily** for:
 - Swelling • Discharge • Redness
- **No sutures need to be removed**; they are buried and skin is sealed with surgical glue.
 - A small bump at the incision site is normal.
- Keep your pet **confined and quiet for 3 days** to avoid complications.
 - **Reduced activity** is recommended for **7–10 days**.

Medication & Bathing:

- Do NOT apply any topical medication to the incision site.
- NO baths for 10 days.
- DO NOT GIVE:
 - Aspirin • Tylenol • Ibuprofen
 - * *These are dangerous or deadly to pets.*
- Do not give any other medications unless instructed by the veterinarian.
 - Pain medication has already been administered.

Additional Notes:

- If your female dog was in heat, keep her **separated from male dogs for 10–14 days** to prevent complications.
- For **male cats**, use **shredded newspaper or paper-based litter for 48 hours**.
